

IMRAN KHAN

Senior Software Engineer

imkhattar999@gmail.com | +92-341-1511941 | [LinkedIn](#) | [GitHub](#) | Lahore, Pakistan

SUMMARY

Results-driven Senior Software Engineer with 4 years of experience designing and implementing scalable backend systems and microservices architectures. Proven expertise in Node.js, Angular, React, and MySQL with demonstrated success in optimizing system performance, achieving 4x faster API response times and improving system reliability by 40%. Strong background in full-stack development and database optimization with a track record of delivering high-impact solutions that enhance user engagement and operational efficiency.

TECHNICAL SKILLS

Backend Technologies: Node.js, Express.js, RESTful APIs, Microservices Architecture

Frontend Technologies: Angular, React, TypeScript, HTML, CSS

Databases: MySQL, PostgreSQL, MongoDB, Redis, Database Design, Query Optimization

Cloud & DevOps: AWS (Lambda, S3, CloudWatch), Docker, Git, GitHub Actions

AI Tooling: Claude Code, Cursor, GitHub Copilot, prompt engineering for code review and refactoring

Monitoring & Logging: ELK Stack (Elasticsearch, Logstash, Kibana), Sentry

PROFESSIONAL EXPERIENCE

Tkxel

Senior Software Engineer

Lahore, Punjab, Pakistan

October 2025 – Present

- Engineered cross-platform in-app purchase subscription system for iOS (Apple App Store Server API) and Android (Google Play Billing), implementing event-driven handlers for grace period, on-hold, cancellation, and renewal lifecycle states, ensuring accurate subscription state
- Architected and led V1→V2 production data migration framework spanning 15+ entity types, with checkpoint-based idempotency, multi-layer verification, and minimal-downtime rollout
- Mentor junior engineers and interns on software development fundamentals, clean code principles, and modern development workflows

Software Engineer

June 2022 – October 2025

- Reduced Redis memory footprint from 6GB to 0.2GB (75% AWS ElastiCache cost reduction) by rearchitecting caching infrastructure with optimized data structures and TTL policies, achieving 3x faster response times while maintaining database consistency
- Architected and developed a comprehensive logging and monitoring service using the ELK stack (Elasticsearch, Logstash, Kibana), reducing troubleshooting time by 50% and enabling real-time system health visibility for the engineering team
- Redesigned the scheduling microservice architecture implementing event-driven patterns and optimized database queries, improving system reliability by 40% and significantly reducing server load and resource consumption
- Engineered database integration layer for MySQL and React-based applications, implementing connection pooling and query optimization techniques that resulted in 4x improvement in API response times for critical services
- Delivered multiple full-stack features using Node.js, Angular, and React frameworks, reducing project delivery time by 25% through streamlined development processes and modular code architecture
- Collaborated with product stakeholders to gather requirements and implement iterative improvements across multiple projects, increasing overall user satisfaction by 30% through data-driven feature enhancements

GoSaaS, Inc.

Software Engineer Intern

Lahore, Punjab, Pakistan

February 2022 – March 2022

- Worked alongside experienced engineers on backend services and UI components using Spring Boot and Oracle JET/Knockout.js, learning RESTful API development, dependency injection principles, and enterprise architecture best practices

EDUCATION

Namal Institute

Bachelor of Science in Computer Science – GPA: 3.45/4.00

October 2018 – May 2022
